The residential house in Gonderange, a town in Luxembourg, stands out not only because of its distinctive sloping position. The facade and roof of the house are made of the same material. This doesn't just visually reduce the building volume but seems to be draped with folds above the building structure. Windows in the ridge of the eaves combine the facade and roof into one unit. A total of 150 m<sup>2</sup> of the roof and 400 m<sup>2</sup> of the facade were clad with RHEINZINK titanium zinc with the RHEINZINK prePATINA graphite grey surface quality with the angled standing seam technique.
